

EC CHAMPIONS

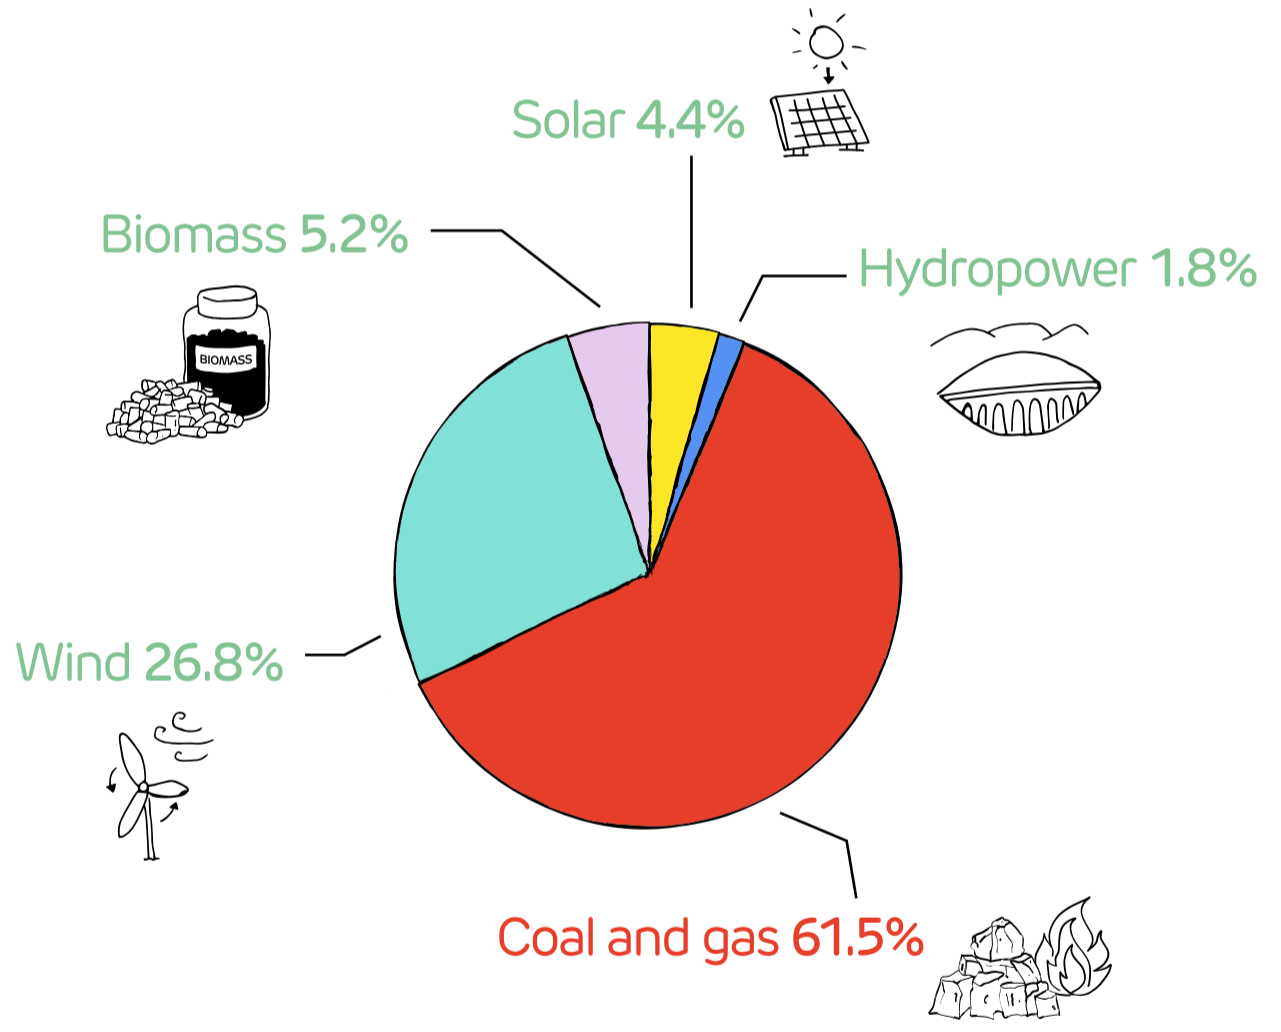

DID YOU KNOW?

In 2022, the renewable sources shown here in green contributed different amounts to the UK's total electricity generation. The rest was made up of non-renewable sources such as coal and gas.

To reduce our daily energy use, follow the tips below.

- Turn off lights and appliances (e.g. your TV) when you leave a room
- Recycle whatever you can and reduce waste
- Don't leave the tap running, or the fridge door open
- Walk or cycle to school

ECO CHAMPIONS

OUTDOORTED

ENERGY

CHOICE 1

Create a poster about energy saving, with tips for people to try. Put the posters around your school to encourage other pupils and staff to get involved. You could also ask people to write a pledge and pin that up, so everyone takes responsibility – publicly – for using less energy.

CHOICE 2

How easy is it to last an hour without using electricity? You can't have lights, TVs, game consoles – and maybe no hot food either!

Use your 60 minutes to read, write, colour in, do a jigsaw, play with some old toys, go outside, make a new game - or anything else that doesn't need power!

TOP TIPS

Here are some ideas for posters:

<https://www.twinkl.co.uk/blog/10-ways-to-save-energy-for-children>

Here are some more great facts: <https://www.funkidslive.com/learn/energy-sources/>

And some facts from National Grid about renewable power:

<https://www.nationalgrid.com/stories/energy-explained/how-much-uks-energy-renewable>

HERE'S THE EVIDENCE!

- Upload some photos or a video of the activity and add a link.
- Or share some other evidence of what you did.
